PREFACE

In this publication, the Ministry of Transportation and Communications provides a summary of the sectional traffic volumes and accident rates on the Provincial Highway Systems as of December 31, 1981.

Local conditions may cause variation in the volume within the sections of highway listed, but on the whole these sections are considered to be adequately represented by the volume shown.

A Provincial Summary of Travel Experience (Mv·km) and Accident Data has also been illustrated in the table on page vii and on the plots on page viii.

Overlaps have been recorded either on an overlapping freeway or the lower numbered highway, whichever the case may be.

The following data is given for each section of highway for which the end points are described in the first column (LOCATION DESCRIPTION):

DIST (KM):                      The length of the section in kilometres to one decimal place.

PATT TYPE:                      The pattern type as used by the Ministry to indicate the variability of traffic flows. Accumulated volume data has been used to group the patterns of seasonal variation of traffic as follows:

- (i)                      low variation, or commuter traffic,
- (ii)                     intermediate variation, a blend of all types of traffic, and
- (iii)                    high variation, including recreational and tourist traffic distinguished  
by weekend to weekday relationships.

These have been further subdivided into the following specific pattern types:

Low Variation or Commuter

UC	-	Urban Commuter
SC	-	Suburban Commuter
C	-	Commuter

Intermediate Variation

IC	-	Intermediate Commuter
CR	-	Commuter Recreation
IR	-	Intermediate Recreation
CTR	-	Commuter - Tourist - Recreation
IT	-	Intermediate Tourist

High Variation - Tourist

LT	-	Low Tourist
T	-	Tourist
HT	-	High Tourist

High Variation - Recreation

LR	-	Low Recreation
R	-	Recreation
HR	-	High Recreation

A graphical presentation of these pattern types has also been included on Page ix.

AADT                      Annual Average Daily Traffic; which is defined as the average twenty-four hour two-way traffic for the period January 1st to December 31st.

SADT                      Summer Average Daily Traffic; which is defined as the average twenty-four hour two-way traffic for the period July 1st to August 31st, including weekends.

SAWDT Summer Average Weekday Daily Traffic; which is defined as the average twenty-four hour two-way weekday traffic for the period July 1st to August 31st, excluding weekends. Weekend traffic is deemed to start at noon on Friday and end at noon on Monday for a normal short-weekend. A long holiday weekend would have an additional day either commencing at noon on the Thursday or ending at noon on the Tuesday, depending on whether the holiday falls on the Friday or the Monday.

WADT Winter Average Daily Traffic; which is defined as the average twenty-four hour two-way traffic for the period December 1st to March 31st, including weekends.

AR Accident Rate; which is defined as the number of reportable accidents  $N_a$ , per section distance  $d$ , in kilometres, per yearly traffic volume (January 1st to December 31st), in millions of vehicles, i.e.

$$AR = \frac{N_a}{3.65 \times 10^{-4} \times AADT \times d}$$

where:

$(3.65 \times 10^{-4} \times AADT)$  represents yearly travel volume expressed in millions of vehicles (Mv) and,

$(3.65 \times 10^{-4} \times AADT \times d)$  represents yearly travel experience in millions of vehicle kilometres (Mv.km).

Reportable accidents are defined as those causing any death or injury or damage exceeding \$400. In 1978 this was increased from \$200. Further, accidents on freeway ramps have not been included in any rate calculations.

Where no accidents occurred on a section, no rates are indicated for that section.

Measuring traffic flows in the Province of Ontario is a major task. Systematic samples of existing traffic flows are obtained throughout the year and the traffic volumes in this book have been calculated from them using accepted mathematical models. It should be emphasized that the values given are estimates based on these samples taken throughout the year, and that each section is actually counted only every three to five years depending on the highway. Extensive continuous counting would be both unmanageable and prohibitive in cost.

Any further inquiries may be directed to the Highway Program Planning Office, Ministry of Transportation and Communications, Downsview at (416) 248-3066.
